CEMBELL TITANIUM AND ZIRCONIUM CLEAN BAY

Cembell has a 15,000 square foot facility for the fabrication of Titanium and Zirconium. The bay is climate controlled with painted floors and completely segregated from our other fabrication bays. We fabricate Titanium and Zirconium Heat Exchangers, Pressure Vessels, Piping, and Miscellaneous items. The bay contains a 6' deep pit to facilitate welding of heat exchanger tube-tubesheet joints in the flat.

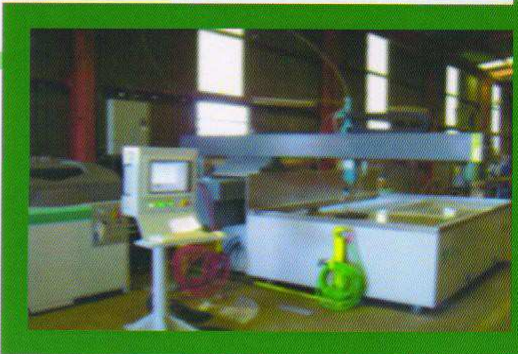

Cembell has multiple orbital welding machines for reactive metal welding, manufactured by Arc Machine and Polysoude. We utilize these for a variety of applications, including seal welding and strength welding of tube-tubesheet joints for Heat Exchangers. We also have GTAW manual welders with years of experience working with Titanium and Zirconium.

Flow Water Jet Machine Mach 2 – 2031b Cutting System

To make clean cuts without adding excessive heat, Cembell has a CNC 6' x 12' water jet cutting table. Thickness of cutting 5" – 6" depending on material of construction.

Cembell has over 25 years of experience working with reactive metals, and is ready to meet your needs for both shop and field work.
